Dear A.J.,

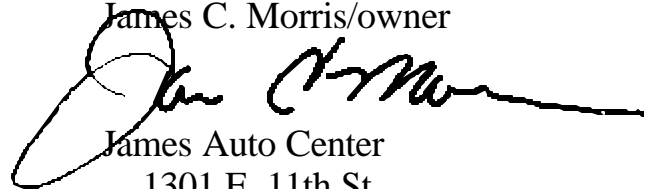

We are so pleased with the Pro-Tek Cooling Siding System. Before the installation the outside temperature of our metal sided building was 135 degrees at 1:00 p.m. and the inside temperature of the metal walls was also 135 degrees. After the product was installed, the outside temperature at 1:00 p.m. was 105 degrees and the inside temperature was 95 degrees. This dramatically decreased the inside temperature of our facility by 40 degrees or 30%. Our air-conditioning bills reflect a substantial decrease in energy consumption.

The crew you had on site remained professional and maintained a neat work site. They did not leave empty containers or tools laying around before, during, or after the job. This meant that my business did not suffer from having a construction crew working during business hours. You followed up on their progress during the job to make sure everything was moving along as you promised. Although the weather did not cooperate, the job was completed in a relatively short amount of time. You followed up on the completed job to make sure that all concerns or questions were answered.

The job on our front office building included resurfacing the roof. This stopped all the leaks that we had and has also decreased our energy bills. I have only good things to say about Pro-Tek.

I believe in you and your company so much that every week I run ads on my Radio Show on FM 101 WYOO to promote your company and service at ***no charge to you.*** We need to let others know that they too can save energy costs and make their business' more attractive by having Pro-Tek come and resurface the siding or roofs of their home or business.

Thank you,
James C. Morris/owner
